## Are Better Than The Odds For

## A Successful IT Project.

## VMC's Project Management Training Can Help Your Project Managers Make Better Calls

Projects are usually measured by the three standards of time, cost and quality. Current reports from Gartner, The Standish Group and other researchers place the failure rate of IT projects around 70%. Another study found that inadequate project management implementation accounts for 32% of IT project failures. With the statistics so overwhelmingly against project success, what can you do to help make heads or tails of how to achieve "on time, on budget and on target" performance for your projects?

VMC Consulting offers a Project Management Fundamentals Training program to help project managers learn, develop and practice project management best practices and standards, which can be applied to improving project performance. This four day training program will arm project managers with the fundamental knowledge and skills to run small to mid-sized projects more successfully, and will satisfy the education requirement needed to sit for Project Management Institute's (PMI) Certified Associate in Project Management (CAPM) or Project Management Professional (PMP) exams.

Designed as a practical, hands-on approach to learning, this training is based on real world project management experiences, seeded with actual project challenges faced by our clients. The training is aligned with PMI concepts and principles, and has been developed by experts with PMP certification and project management and instructional design experience. The training is delivered by PMP professionals with years of training experience. Participants experience project management simulations in a team environment, managing a project through the entire project life cycle, from initiation to close.

Project management training can improve the commitment of your employees to your company, as well as improve their performance. Arming project managers with the knowledge and skills of best practices for project management based on PMI standards gives them the tools necessary to make effective decisions and lead organizations to success. Providing project management training can provide clarity around roles and responsibilities and identify career pathing and succession planning within your organization.

If you are looking to improve the quality and efficiency of your projects, you can increase your likelihood for success by following proven methods and best practices for project management implementation. VMC's Project Management Fundamentals Training program can help you improve effectiveness in delivering projects on time, on budget and on target. Give your team a competitive edge. Call VMC to schedule Project Management Fundamentals Training for your team.
