

**The Right Training Can Be  
The Difference Between  
Success and Failure.**

## **Let VMC Teach Your Team the Fundamentals for Improving Success in Project Management**

Gartner studies suggest that 75% of all US IT projects are considered failures by those responsible for initiating them. Project management is a challenge for most organizations. How can you improve the success of projects within your organization? That can be, quite literally, the million dollar question.

VMC Consulting is an IT consulting and outsourcing partner with expertise in project management consulting, outsourcing and training. Our proven methodologies and best practices are based on Project Management Institute (PMI) standards. Our track record for success has saved millions of dollars for companies through better management of time, budget and quality in their projects. Our certified Project Management Professionals (PMP) help organizations around the world, both large and small, improve the success of their projects. In short, we've been there, done that, and stand ready to help with successful project management.

We offer a Project Management Fundamentals Training program to help project managers learn and develop project management best practices and standards, which can be applied to improving project performance. This learning program can take place at your location, a VMC facility, or a neutral site. After determining the specific needs of your organization, a training plan and logistics are decided. Participants in the program take part in a four day, hands-on training experience, plus a two hour Live Meeting follow up session, to gain a better understanding of the key concepts, knowledge and skills of PMI-based project management.

- Day 1: Project Management Overview, PMBOK, PMI, Initiation
- Day 2: Integration, Scope, Time and Cost
- Day 3: Quality, HR, Communication, Risk, Procurement
- Day 4: Execution, Control and Close

During training, a simulated project empowers participants to use the fundamental knowledge and skills of project management. By completing this PMI based program, participants receive a certificate verifying that they have completed the educational requirement allowing them to sit for the PMP or Certified Associate in Project Management (CAPM) exam.

Project management training can improve the commitment of your employees to your company, as well as improve their performance. If you are looking for better project management and project success, sign your team up for VMC's Project Management Fundamentals Training program, today.
